1.0 Introduction

Western Copper Corporation has prepared this Profile to provide an overview of our Company and our Yukon projects.

The Carmacks Copper Project and the Casino Project are the most significant and the most advanced properties owned by Western Copper.

Since 2006, Western Copper has invested over C\$19 million to advance and to develop its Yukon properties. Western Copper is committed to continue moving these projects forward with the goal of advancing them to production. We believe this can be done in a way that provides lasting benefits to all Yukoners.

Western Copper will develop the mineral resources at Carmacks Copper Project and Casino Project in a safe, and environmentally and socially responsible manner using sound and proven technologies and industry best practices.

We are committed to Yukon and to the communities in which we operate. We believe that our projects can make a significant and positive contribution to the well being of the people living in the territory. We are committed to providing opportunities to generate wealth. By collaborating and partnering with all levels of governments and with Yukon communities, Western Copper aspires to establish mutually beneficial partnerships.

We invite you to review this document and provide your comments and suggestions on our development plans. We look forward to hearing from you.

2.0 About Western Copper Corporation

Western Copper Corporation is an exploration and development company directly engaged in advancing its mineral properties to production.

Western Copper is a public company and started trading on the Toronto Stock Exchange (WRN-T) in May 2006.

Western Copper holds significant gold, copper and molybdenum resources and reserves in four Canadian properties: the Carmacks Copper Project and the Casino Project, the Hushamu property in British Columbia and the Redstone property in the Northwest Territories. Western Copper also owns the Sierra Almoloya property in Mexico.

Western Copper's two most advanced projects are the Carmacks Copper Project and the Casino Project.

2.1 Project Development Status

1. Carmacks Copper Project

- Feasibility Study completed
- YESAA Environmental Assessment completed
- Project is proceeding to secure major operating permits

2. Casino Project

- Pre-feasibility study completed
- Advanced exploration and engineering studies are underway
- Environmental and Socio-economic studies and baseline data collection underway
- YESAA project description to be submitted in 2010

Location of Carmacks and Casino Mine Sites

2.2 Management Team

Western Copper's management team has considerable expertise in both mining and financial sectors:

F. Dale Corman, B.Sc., P.Eng.	President & Chief Executive Officer
Jonathan Clegg, P.Eng.	Vice President, Engineering
Claire Derome, B.Sc., M.Ed.	Vice President, Government & Community Relations
Julien Francois, CA	Vice President, Finance & Chief Financial Officer
Cameron Brown, P.Eng.	Project Manager
Jim Marlow, B.Sc., B.A.Sc., P.Eng.	Senior Mining Engineer
Paul West-Sells, Ph.D.	Senior Metallurgist

3.0 Western Copper in the Yukon Territory

Western Copper aims to become one of Yukon's leading mining companies. We are committed to investing in Yukon and developing our two Yukon projects in a manner that respects the environment and provides long-term benefits to Yukon communities, our employees, business partners and our shareholders.

Western Copper is an established corporate citizen in Yukon. Western Copper's management team include members that have been actively engaged in Yukon mining industry for more than 20 years.

Since the Company was created in May 2006, approximately C\$15 million have been spent advancing the Carmacks Copper Project and approximately C\$4 million advancing the Casino Project. This work has comprised diverse types of activities ranging from drilling, environmental work, permitting, engineering, and feasibility-type studies.

Whenever possible, Western Copper retained local resources and expertise to execute its programs including: Access Consulting Group, Gartner Lee Limited (now AECOM Canada), Casselman Geological Services, Kluane International Drilling Inc., Jacobs Industries, Aurora Geosciences Ltd., Yukon Engineering Services, Alkan Air, and many more. All of these firms have contributed to advancing Western Copper's projects. Western Copper is committed to using local expertise wherever possible in every stage of project development.

Carmacks Copper Project Office

The Company has two offices in Yukon: a corporate office in Whitehorse and a project office for the Carmacks Copper Project in Carmacks.

Western Copper is represented in Yukon by Claire Derome, Vice-President Government and Community Relations. Claire is part of Western Copper's senior management team and has been a resident of Whitehorse for the last five years.

4.0 Sustainable Development & Social Responsibility

Western Copper is committed to operating in a way consistent with the goals of Sustainable Development and Social Responsibility.

Our projects will be developed in a manner that respect and protect the environment and enhance benefits to Yukon and Yukon communities. We recognize that this is vital to our company's existence, progress and continued development.

In addition to sustainable development, Western Copper believes we must be good corporate citizens, employ ethical business practices and engage with proximate communities, businesses and governments to be consistent with the goals of social responsibility. We will work in partnership with Yukon and First Nation governments and local governments, employees, contractors and suppliers, other stakeholders and interest groups, and the public in general with the objective of creating lasting benefits.

We recognize that our projects have effects on communities. We know that our operations are not only important to our shareholders, but also to the communities in which we operate. And, we believe that establishing strong collaborative relationships and open and transparent communication will help ensure our projects operate at the highest standards possible.

Western Copper in its everyday operation takes positive action to protect the safety of its workers and to conserve natural resources while minimizing the impact on the environment. We are applying appropriate technology and we are conducting ourselves responsibly at all stages of mining: exploration, mine development, mine production and processing, decommissioning and reclamation.

4.1 Community Engagement

Western Copper is committed to respect the people who live near our projects, including their rights, languages, cultures and livelihoods.

Western Copper will work with First Nation governments in designing and conducting consultation that meets the needs of the communities and respects the rights and traditions of First Nations.

The company believes that its future operations can provide opportunities and long-lasting benefits for nearby communities while respecting traditional livelihoods and land use. This can be achieved by building a relationship based on respect that is open, fair and allows for the mutual exchange of information.

5.0 Carmacks Copper Project

5.1 Project Location

Carmacks Copper Project Location

The Carmacks Copper Project is located 45 km to the northwest of the community of Carmacks, in the Traditional Territory of the Little Salmon Carmacks First Nation and Selkirk First Nations.

The Project site is currently accessible by an existing 12 km exploration road that leads north from km 33 of the Freegold Road from Carmacks.

5.2 Project Overview

The Carmacks Copper Project contains an oxide copper deposit that will be mined as an open pit (the size of the open pit is similar to the Minto Mine pit).

The extraction process will produce over 33 million pounds of copper on average each year. This process will produce 99.9% pure copper metal at the mine site. At that stage, the metal is ready for transformation into finished products. It will be transported and sold to market.

Minto Mine Pit

The extraction technology is a well known and tested process that is used extensively in North and South America and in Australia. More than 20% of the world copper supply is produced through this technology.

Carmacks Copper Project

The project is expected to be active for over 8 years. The project construction will require 2 summers at an estimated cost of C\$140 million, followed by more than 6 years of production. Reclamation will start in the early stage of production while final closure is expected to be completed 5 to 10 years after the end of the mining phase.

Construction is subject to completion of the permitting process and to obtaining the financing.

5.3 Environmental Protection

Western Copper is committed to achieving the following four objectives during construction, operation, reclamation and closure of the mine:

- Protect public health and safety;
- Minimize, mitigate or prevent adverse environmental impacts;
- Reclaim the site to a land use state consistent with surrounding conditions; and
- Ensure long-term stability of the spent ore and waste rock storage area and site water quality.

5.4 Employment Opportunities

Western Copper anticipates that approximately 250 workers will be required at peak construction and approximately 180 workers at peak production.

Most of the employment position will be at an entry level. The work schedule will be based on two 12 hour shifts with equal time on and off (approximately seven days).

Mine operation will also require administrative staff at site that will work 8 hour shifts from Monday to Friday.

Western Copper is committed to employ as many people as possible from Carmacks, Pelly Crossing and other Yukon communities. Some of the non-local employees and their families may choose to move to Carmacks. Western Copper will provide worker transportation from Carmacks to the mine site thus reducing the number of vehicles on the local roads.

Western Copper is committed to investing in the training and upgrading of its workforce. This training will provide lasting benefits to employees beyond their tenure with the company.

5.5 Business Opportunities

Western Copper intends to work very closely with the local business community and with the development corporations of both the Little Salmon Carmacks First Nation and the Selkirk First Nation to provide local and regional firms with every opportunity to supply needed goods and services.

Western Copper estimates that the value of goods and services required each year to operate the mine will total approximately C\$8 million. These services and supplies will be obtained as much as possible from local and regional sources.

Some examples of the ongoing contract work available through the life of the mine may include: camp catering and maintenance, fuel sales and hauling, expediting and light delivery services, personnel transportation, environmental services and site security services.

5.6 Participation Agreements

Western Copper is committed to negotiate mutually beneficial participation agreements for the Carmacks Copper project with Little Salmon Carmacks First Nation and with Selkirk First Nation.

6.0 Casino Project

6.1 Project Location

Casino Project Location

The Casino property is located in west central Yukon, 300 km northwest of Whitehorse. The project lies entirely within Selkirk First Nation Traditional Territory with a partial overlap to the north of the property into the Tr'ondëk Hwëch'in First Nation Traditional Territory. Depending on its final routing, the proposed Casino access road may lie within other First Nations traditional territory.

A small air-strip located at the site and a 22 km road connecting the Casino site to the Britannia Creek Landing on the Yukon River currently provides access to the property.

6.2 Project Overview

The Casino project contains a copper, gold and molybdenum ore reserve in excess of one billion tonnes.

An independent pre-feasibility study on the Casino Project, which assessed that the project can be economically developed as a conventional open pit mine, was completed in June 2008.

Casino Deposit

Over a projected mine life of 30 years the mine will produce 3.6 billion pounds of copper, 320 million pounds of molybdenum and 5 million ounces of gold.

The mine will require the construction or upgrading of an all-season access road and the construction of a power plant to provide 100 MW of electrical power.

Western Copper will produce a gold/silver doré at the mine site and copper-gold and molybdenum concentrates. The concentrates will be transported to the port of Haines or Skagway in Alaska for shipping to smelters.

Construction will unfold over a period of 4 years and it is subject to completion of the Yukon Environmental and Socio-economic Assessment review, to obtaining the required permits and to raising the financing.

6.3 Project Status

During the summer of 2008 the Company established a new exploration camp at the Casino Project to support exploration work over the next 5 years. Since obtaining its exploration permit in early October the Company has started a small drilling program that will end in late November.

Western Copper instructed Gartner Lee (AECOM Canada) to commence the collection of baseline environmental data and socio-economic information that will be used to complete the Casino Project Proposal. This proposal will be submitted for assessment to the Yukon Environmental and Socio-Economic Assessment Board most likely in 2010.

Some baseline environmental studies started in 2008, including surface water flow and quality studies, groundwater studies, fish and fish habitat studies, wildlife and plant studies, and meteorology studies. This work along with data collection and studies concerning heritage and archaeology, Traditional Knowledge, resource use, and socio-economics will continue into 2009.

Consultation with affected First Nations and communities about the project and the baseline studies will be an important component of the baseline programs.

Western Copper is confident that the project can be designed to reduce or eliminate potential environmental impacts. The company is also confident that collaboration with First Nations governments and the Yukon Government will help to identify, reduce, and ideally eliminate any potential negative social, cultural, health, or economic impact at an early stage. Western Copper will also strive to maximize the potential positive economic impacts of the project for the benefit of nearby communities and the Yukon.
