

# REDSTONE

## SNAPSHOT

OWNERSHIP	100%
STATUS	Data Analysis: UBC project to study regional geology and identify area with the most exploration potential
LOCATION	Nahanni Mining District, Northwest Territories
DEPOSIT TYPE	Sediment-hosted stratiform copper deposit
MINE TYPE	Underground
PRIMARY METAL	Copper
END PRODUCT	Copper concentrate
INFRASTRUCTURE	Access to the property is presently by air

Based on Technical Report - August 2005

## PROJECT OVERVIEW

The Redstone Property is located 300 km north of Watson Lake, Yukon and comprises discontinuous claims and leases stretching over approximately 100 km in a northwest-southeast orientation.

The Redstone Copper Belt is essentially an unmetamorphosed succession that is locally well exposed in an arcuate belt less than 15 km wide and about 300 km long. The inferred resource is located on the Coats Lake lease, which represents a small proportion of the total area of mineral rights.

Western Copper is currently working with the UBC Department of Earth and Ocean Sciences to analyze this large land package in order to develop our future exploration plans.

## RESOURCE

Class	Tonnes M	Resource Grade			Contained Metal
